Claim 14; Fig 2 and R11810; English.

Complement activation to concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of composition of them. CR1-4 is a preferred truncated form and a number of compositions in SCR-2 which have been identified as important for the corresponding positions in SCR-9. The specification does not the corresponding positions in SCR-9. The specification does not contain the CR1-4 sequence; the sequence given here was constructed accession number R11810 and descriptions in the disclosure.

                                                                                                        damage due to inflammation and in treatment of thrombosis Disclosure; Fig 5; 234pp; English.

This sequence comprises three of the four tandem, direct, long homologous repeats of the full-length F allozyme of CR1. LHR-A is absent. Each LHR might represent a single C3b/C4b binding domain, making the receptor multivalent. The LHR's are composed of 7 short consensus repeats of 60-70 residues resembling the SCR's of other c3/C4 binding proteins. The protein and fragments of it having C3) and/or C4b binding activity can be used to treat immune disorders

#title cDNA structure of rabbit C4b-binding protein alpha-chain.

Preserved sequence motive in complement regulatory protein modules which bind C4b.

NT C4BP controls the classical pathway of complement activation. It
binds as a cofactor to C3b/C4b inactivator (C3bINA), which then
hydrolyzes the complement fragment C4b. It also accelerates the
degradation of the C4bC2a complex (C3 convertase) by dissociating
the complement fragment C2a.

NT C4BP occurs in plasma in two forms, both of which bind complement
fragment C4b. The prevalent higher molecular weight form contains
7 alpha chains and one beta chain, which are linked by disulfide
bonds. The beta chain binds the vitamin K-dependent plasma
protein S. A minor form lacks the beta chain. Bound protein S is
inactive as a cofactor for protein C inactivation of coagulation
factors V and VIII.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Thu Jun 8 21:50:30 2000; MasPar time 15.22 Seconds 856.639 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score:

Sequence: >US-09-316-163-14 (1-428) from US09316163.pep 3371 1 EDCKGPPPRENSEILSGSWS......DTYYCTENGWSPPPKCVRIK 428

Scoring table: PAM 150 Gap 11

Post-processing: Minimum/Match 0% Listing first 45 Searched: 83857 seqs/ 30454973 residues gummaries

Database: swiss/prot38 1:swissprot

Statistics: 46.246; Variance 66.763; scale 0.693

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FUNCTION: FACTOR H FUNCTIONS AS A COFACTOR IN THE INACTIVATION OF C3B BY FACTOR I AND ALSO INCREASES THE RATE OF DISSOCIATION OF THE C3B BY COMPLEX (C3 CONVERTASE) AND THE (C3B)NBB COMPLEX (C5 CONVERTASE) IN THE ALTERNATIVE COMPLEMENT PATHWAY.

SIMILARITY: CONTAINS 20 SUSHI (SCR) REPEATS.

CAUTION: REF. 2 SEQUENCE DIFFERS FROM THAT SHOWN FROM POSITION 341 ONWARD DUE TO A FRAMESHIFT.

J. Biol. Chem. 268:2904-2908(1993).
-i- FUNCTION: MIGHT BE INVOLVED IN COMPLEMENT REGULATION.
-i- SUBCELLULAR LOCATION: EXTRACELLULAR.
-i- SIMILARITY: CONTAINS 5 SUSHI (SCR) REPEATS.
-i- SIMILARITY: STRONG, TO FACTOR H.

CC -!- FUNCTION. IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR

CC ACTIVATION. IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR

CC (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT 
CC ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 
CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA 
CC CHAIN BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S 
CC SUBUNIT: DISULFIDE-LINKED COMPLEX OF C4BP ALPHA AND BETA CHAINS. 
CC -!- SIMILARITY: CONTAINS 8 SUSHI (SCR) REPEATS.

J. Immunol. 153:4190/4199(1994).

-I- FUNCTION: C4BP CONTROLS THE CLASSICAL PATHWAY OF COMPLEMENT ACTIVATION. IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 CONVERTASE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN BINDS C4B. IT INTERACTS ALSO WITH SERUM AMYLOID P COMPONENT.

-I- SUBUNIT: DISULFIDE-LINKED COMPLEX OF C4BP ALPHA AND BETA CHAINS
                                                                                                                                                                                                                                                                                                                                                                                                                                    DISULFID DISULFID DISULFID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This SWISS-PROT entry is copyright.
